

INDIAN COFFEE. GOAN STATE OF MIND.

A slower morning. A *brighter* cup.

For the first light through the shutters. For a long conversation after lunch. Meet MARÉ: a little coast, a lot of curiosity, and a fresh way into Indian coffee.

AN INDEPENDENT GOAN ROASTER CONCEPT

Explore the proposed range. Plan a bag. No live checkout.

Your grinder, your call.

Whole beans keep their aroma longer. No grinder? Choose a grind for your brewer in the bag planner, rather than settling for one mystery grind that promises to do everything.

02

Milk is very welcome.

A bright filter cup and a comforting milk coffee are equally good mornings. Look for cocoa and nut profiles with milk; try fruit-led profiles black before deciding what you like.

03

Curiosity over jargon.

Tasting notes are comparisons, not added flavours. You do not need to taste a particular fruit to enjoy your cup. Sweetness, balance and wanting another sip are better starting points.

01 / THE COFFEE SHELF

Six routes to your kind of morning.

Indian-grown coffee, from familiar cocoa comfort to a little citrus lift. Start with how you drink, then follow your curiosity.

01 / KARNATAKA

COMFORTING

Coorg, unhurried.

Cocoa · toasted almond · soft caramel

Kodagu's coffee landscape often shares space with pepper and shade trees. This proposed washed arabica profile aims for rounded sweetness, not a claim that every Coorg lot tastes alike. An easy first choice for a moka pot or a small splash of milk.

MEDIUM ROAST

WASHED ARABICA

₹480 / 250 g

Chikmagalur light.

Orange peel · jaggery · milk chocolate

Chikkamagaluru is one of India's established coffee-growing districts. Our intended washed arabica style keeps some citrus brightness against a sweeter base. Try it as a pour-over; the cup should feel lively rather than sharp. Actual variety and elevation need a confirmed lot.

MEDIUM-LIGHT ROAST

WASHED ARABICA

₹520 / 250 g

Baba's bright side.

Dried cherry · cacao · brown sugar

Baba Budangiri sits within the Chikkamagaluru growing region, not a separate state or estate. This natural-process arabica proposal explores a fuller, fruit-forward direction. Drying coffee inside its fruit can influence sweetness and aroma, but careful processing matters more than a fashionable label.

MEDIUM-LIGHT ROAST

NATURAL ARABICA

₹560 / 250 g

Araku afternoon.

Red apple · honey-like sweetness · tea

Araku lies in the Eastern Ghats, where coffee is grown by many smallholders, including Adivasi communities. This washed arabica concept favours a gentle filter cup. We do not claim a producer partnership, organic certification or community benefit without a documented purchase and traceable supplier.

LIGHT-MEDIUM ROAST

WASHED ARABICA

₹620 / 250 g

Nilgiri daybreak.

Pear · hazelnut · mellow cocoa

The Nilgiris are better known for tea, but coffee also grows on suitable slopes in the district. Our proposed washed arabica profile is soft and nutty, suited to an immersion brew. This is a regional reference, not a claim that the beans grow at the highest summits.

MEDIUM ROAST

WASHED ARABICA

₹540 / 250 g

After the monsoon.

Roasted nuts · spice · dark cocoa

Monsooning exposes cured green coffee to humid coastal air under controlled conditions. It is a process, not a farm origin. This proposed monsooned arabica would come through coastal Karnataka, with the growing source disclosed separately. Expect a heavier, lower-brightness style that welcomes milk.

MEDIUM-DARK ROAST

MONSOONED ARABICA

₹580 / 250 g

A note on the shelf: these are proposed regional profiles and indicative INR prices, not available inventory or verified tasting results. No estate, harvest, score or certification is implied. A released coffee would need its producer or supplier, crop information, process and roast date confirmed. All bags shown are 250 g of unflavoured coffee.

The coast is home. The grower comes first.

Goa gives this concept its pace and palette. It does not automatically give the coffee its origin. Much of India's coffee is grown in the southern hills, and each cup carries decisions made long before roasting: shade, harvest timing, sorting, fermentation and drying.

Our sourcing standard is simple: say what is known, distinguish it from what is hoped for, and make room for the people doing the agricultural work. A romantic region name is not traceability.

Names, not borrowed stories.

A producer or supplier should be named with permission. No invented family farms, direct-trade relationships or feel-good impact numbers.

Specific lots, not permanent promises.

Harvests change. A future release should state the process, available crop details and a cup description based on that actual coffee.

Clear prices, before commitment.

Packaging, delivery, tax treatment and subscription terms must be visible before any real payment. This planner takes none.

Keep the cupboard on coastal time.

Choose the amount you actually brew.
These proposed subscriptions arrive in
250 g portions, so the next bag stays
closed while you enjoy the first.

Monthly billing: pay for one month at a time. Annual prepayment reduces the equivalent monthly price by 10%.

FOR ONE DAILY RITUAL

The Drift

500 g / month · 2 × 250 g

₹750 / month

₹750 billed monthly

₹0 annual savings on monthly billing

A comfortable place to start for one person brewing a modest daily cup. At 16 g per brew, two bags make about 31 cups; your recipe may use a little more or less.

- Two portions of one selected profile
- Whole bean or a brewer-specific grind
- A simple recipe to start from

FOR A SHARED KITCHEN

The Daily Tide

1 kg / month · 4 × 250 g

₹1,400 / month

₹1,400 billed monthly

₹0 annual savings on monthly billing

Room for two morning cups and the occasional friend at the table. A kilogram gives roughly 62 brews at 16 g, making this a useful reference for a coffee-loving pair.

- Four portions of one selected profile
- The same grind across every portion
- Enough coffee to practise your recipe

FOR THE GENEROUS POT

The Open House

2 kg / month · 8 × 250 g

₹2,600 / month

₹2,600 billed monthly

₹0 annual savings on monthly billing

For a busy household, a shared studio or a large morning press. Eight small bags are easier to keep fresh than one repeatedly opened sack. Expect about 125 cups at a 16 g dose.

- Eight portions of one selected profile
- Practical for batch and immersion brewing
- A clear quantity for a shared budget

Annual means one upfront payment for twelve monthly quantities, not twelve months of coffee delivered at once. Savings compare with twelve payments at the displayed monthly rate. These are planning prices only; shipping and applicable taxes are not calculated. No recurring charge is created, and cancellation or pause terms are not offered as a live service.

Less guesswork. More good cups.

A scale helps, but attention matters more. Start with clean equipment and pleasant-tasting water. Change just one variable between brews so you can taste what changed.

A bright, unhurried pour.

A paper filter gives a clean cup and lets delicate aromas through. Medium-fine grounds should look a little finer than granulated sugar. Start here with Chikmagalur light or Araku afternoon.

COFFEE / WATER
16 g / 256 g

WATER
92–96°C

TOTAL TIME
2:30–3:30

- 01 Rinse the paper with hot water and discard the rinse. Add coffee, then gently shake the brewer to level the bed.
- 02 Start a timer. Pour 45 g of water evenly over the grounds and wait 30–40 seconds. This bloom helps trapped gas escape.

- 03

Pour slowly in two or three stages until the scale reads 256 g. Keep the stream gentle and avoid pouring directly down the paper walls.
- 04

Let the water drain, remove the brewer and swirl the cup. Taste once it cools a little; very hot coffee can hide both sweetness and faults.

Next cup: if it tastes thin and sour, try a slightly finer grind. If it feels dry and bitter, go a little coarser. A slow drawdown can also mean a clogged filter, not simply a dark roast.

A full-bodied, easy morning.

The French press keeps more oils in the cup. Use a medium-coarse grind rather than huge, uneven chunks. Coorg or Nilgiri is a comfortable place to begin.

COFFEE / WATER	WATER	TOTAL TIME
30 g / 480 g	92–96°C	6–8 minutes

- 01

Warm the glass with hot water, empty it and add your grounds. Set the press on a stable, heat-safe surface.
- 02

Add all 480 g of water, saturating the grounds. Rest the lid on top without pushing the plunger down. Wait four minutes.
- 03

Stir the floating crust gently. Scoop off excess foam if you prefer a cleaner cup, then allow two to four minutes for grounds to settle.
- 04

Lower the plunger slowly without forcing it. Pour gently into cups or a separate server rather than leaving brewed coffee on the grounds.

Next cup: muddy texture often comes from fine particles and rough pouring. Letting the coffee settle can help more than grinding dramatically coarser.

A little pot, a deeper cup.

A moka pot makes concentrated coffee, not espresso. Pot sizes vary, so use the manufacturer's fill level rather than forcing a fixed recipe. A medium-fine grind works well with Coorg or After the monsoon.

COFFEE	WATER	HEAT
Level basket	Below valve	Low–medium

- 01 Check the gasket and safety valve. Fill the base with water to the maker's marked level, never covering the valve. Warm water is optional; use a cloth if the base is hot.
- 02 Fill the basket loosely and level the grounds. Do not tamp them or obstruct the filter. Assemble securely according to the pot's instructions.
- 03 Place over low-to-medium heat, keeping the handle away from the flame. Stay nearby and watch for a steady flow of coffee into the upper chamber.
- 04 Remove from heat when the flow turns pale or begins to sputter. Let pressure subside before opening. Dilute the brewed coffee with hot water or warm milk to taste.

Next cup: a harsh, burnt taste can mean the pot stayed on the heat too long. Keep the valve clear and never open a pressurised pot.

For the warmest afternoons.

This is a ready-to-drink starting recipe, not a strong concentrate. Use a clean covered container and brew in the fridge, especially in Goa's heat. Medium-coarse coffee keeps filtering manageable.

COFFEE / WATER
60 g / 720 g

TEMPERATURE
Refrigerated

STEEP
12–16 hours

- 01 Add grounds and cool, drinking-quality water to a clean container. Stir until every patch of coffee is wet.
- 02 Cover, refrigerate and note the start time. Begin tasting at twelve hours rather than assuming a longer steep is always better.
- 03 Strain through a fine sieve, then a rinsed paper filter if you prefer less sediment. Transfer to a clean, covered bottle and keep refrigerated.
- 04 Pour over ice and dilute only if it tastes too strong. Make small batches and use within two to three days; discard coffee with an unusual smell or appearance.

Next cup: if it feels flat, try a shorter steep or a brighter coffee. Cold extraction changes flavour; it does not make the drink caffeine-free or shelf-stable.

Not a beach souvenir. A morning companion.

MARÉ takes its name from the Portuguese word for tide. The visual language borrows the rhythm of tiled verandas, shuttered windows and the changing light after rain. Goa is a living place, not just a holiday backdrop; the idea is to make something at home on an ordinary kitchen shelf.

“Let the day gather slowly.”

That is our own little reminder, not a testimonial. You might drink your coffee before a commute, between work calls or beside yesterday's newspaper. There is no correct coastal lifestyle to buy into. The ritual only needs to fit your day.

The proposed range stays Indian-grown rather than borrowing the glamour of distant origins. When a coffee eventually earns a place on this shelf, its agricultural story should be more precise than the illustration on its bag.

Freshness is a habit. Not a countdown.

Heat, moisture and repeated exposure to air are the enemies. On a humid coast, a few small storage choices matter more than a beautiful jar.

FIELD NOTE / 01

Close it. Shade it.

Keep coffee sealed in a cool, dry cupboard, away from the hob and direct sun. Squeeze excess air from a resealable bag before closing it. A clear jar on a sunny windowsill looks lovely but gives your beans the wrong kind of coastal holiday.

Do not store an everyday bag in the fridge: repeatedly opening cold coffee in humid air can encourage condensation. Keep your scoop dry, too.

FIELD NOTE / 02

Let the roast settle.

Freshly roasted coffee releases gas. Some rest can improve an even extraction, particularly for espresso. A few days to two weeks is a useful exploration window, not a universal instruction; roast style, packaging and brew method all change the answer.

A future bag should carry its roast date and a practical starting recommendation. Follow your cup rather than treating the youngest bag as automatically the best one.

FIELD NOTE / 03

Buy for your rhythm.

Divide your weekly coffee dose by the bag weight before subscribing. Two 16 g cups a day use 224 g a week, so a single 250 g bag will not last a couple all month. Ground coffee loses aroma faster; smaller sealed portions can help.

If you freeze spare whole beans, seal them in small airtight portions. Let a portion come fully to room temperature before opening, and avoid repeatedly thawing the same bag.

A little clarity goes a long way.

This is a working discovery and planning space, not an operating storefront. Here is what you can decide now, and what a real order would still need.

Choose the right grind.

The planner offers whole bean, pour-over, French press and moka grinds. Match the selection to the equipment you own. If you use a South Indian metal filter, espresso machine or another brewer, do not assume these settings will fit; a real roaster should confirm that grind with you.

One grind applies to this whole plan. For different brewers, save separate plans so your preference stays unambiguous.

Check the journey.

There is no dispatch promise, delivery area or unverified café address here. Before buying from any roaster, confirm the roast schedule, destination coverage, packing method and a realistic transit estimate for your PIN code, especially around monsoon disruptions.

Delivery fees and applicable taxes are excluded from this planner. Its total is a coffee budget, not an amount due.

Keep a useful record.

Add coffees, compare subscription sizes and save a plain-text plan for later. Your plan stays in this page session and disappears on refresh; only your light or dark display preference is remembered on this device.

No payment details, account or email address are requested. The saved file is yours to keep or share; saving it does not send an order anywhere.

Coffee questions. Straight answers.

No secret vocabulary required. These answers cover the proposed range and the planner. For a first brew, the kitchen notebook above is a more useful companion than an expensive new gadget.

Can I buy these coffees right now?

Not here. MARÉ is an original roaster concept with indicative profiles and pricing. You can make and download a plan, but there is no stock reservation, checkout, payment or subscription enrolment. A live release would need confirmed lots, a real seller and complete terms first.

Is the coffee grown in Goa?

The identity is Goan; the proposed coffees are not labelled Goa-grown. The cards distinguish growing regions from processing geography. A future monsooned coffee would need both its growing source and the location of monsooning disclosed, rather than treating the coast as a farm.

Are the tasting notes added ingredients?

No. Notes such as cocoa, pear and almond describe possible sensory impressions from unflavoured coffee. They are not ingredient or allergen statements. Here they are intended profile directions, not verified cupping results. Any actual packaged product would still need its own ingredient and handling information.

How does the annual saving work?

The annual proposal costs 90% of twelve monthly payments. For The Drift, ₹750 × 12 is ₹9,000; a 10% reduction makes ₹8,100 upfront, equivalent to ₹675 per month. The ₹900 saving is for the whole year. The switch updates all three tiers and any subscription already in your plan.

Which coffee should I try with milk?

Start with the proposed Coorg or monsooned profiles for cocoa, nuts and more body. Brew a little stronger before adding milk rather than choosing an extremely dark roast by default. The lighter profiles are worth tasting black first so their subtler differences are easier to notice.

Does a subscription plan select an origin?

Yes. Once a tier is added, an origin selector appears in your bag planner. The proposed rate is the same across these six profile options, and all monthly portions use that one selection. This records a preference, not a guarantee that a future crop will be available.

09 / TAKE A LITTLE MORNING WITH YOU

Your coffee.
Your little plan.

Build a shortlist from the shelf, or add one subscription to compare your monthly routine. Single bags and subscriptions remain separate in the summary, so an annual prepayment never hides inside a monthly total.

Use the plus and minus controls to adjust 250 g bags. Save the plan when it feels right; it is a useful note, not an order or a promise of availability.
